

## HyGenikx -- How Does It Work ... Simplified

1. Contaminated air enters through the base of the unit
2. UV light reacts with the Titanium Dioxide catalyst plates creating strong oxidizing radicals (OH)
3. These oxidizing radicals attack & kill the incoming micro-organisms (viruses, bacteria, fungi, molds, etc.) by disrupting their DNA & reproductive capabilities
4. The various micro-organisms decompose forming harmless water and carbon dioxide that are expelled through the top of the unit

**Make HyGenikx the Cornerstone  
of Your Hygiene Strategy**
